## **NABORS INDUSTRIES LTD.**

TWO THOUSAND & ELEVEN ANNUAL REPORT

## A STREAMLINED FOCUS

## PRINCIPLES upon which Nabors was built:

| $\bigcirc$ | Maintain a strong and flexible |
|------------|--------------------------------|
|            | balance sheet                  |

- Invest capital for returns well above our cost of capital
- Make use of our size
- Deliver operational excellence

## DEAR SHAREHOLDERS

O11 was a year of transition at Nabors Industries in many aspects of our business. There was a return to growth

among our North American units and a bottoming out in our International results. The transition in the US and Canada from natural gas to oil and liquidsrich drilling continued unabated, and our Gulf of Mexico operations returned to profitability as permitting delays began to subside.

Most notable was the fourth quarter transition in the Chief Executive position. Succeeding Gene Isenberg, who during his 25-year tenure grew the company from bankruptcy to an S&P 500 index company, is a formidable task. Gene was

responsible for establishing the principles that steered the company from a minor player to the largest land driller in the world, a feat made more remarkable since it was accomplished during one of the most challenging periods in this inherently cyclical industry. These principles included maintaining a strong and flexible balance sheet; allocating capital judiciously; building and leveraging a global infrastructure; achieving superior operational and safety performance.

In recent years, Nabors has fallen short of our potential. The abrupt downturn in drilling activity brought on by the financial crisis of 2008 reduced our cash flow, lowered our credit metrics and derailed plans to monetize our oil and gas investments at what

ANTHONY G. PETRELLO

Deputy Chairman, President and
Chief Executive Officer

were then attractive valuations. These developments inhibited our financial flexibility – for years the trademark of our company – and prevented us from fully capitalizing on opportunities that arose as the market improved.

Today, our highest priority is restoring that financial flexibility by reducing our net debt through both asset sales and the generation of free cash flow.

To that end, we have initiated sale processes on two of our more liquids-prone oil and gas assets, and we expect to consummate these transactions later this year. We have also put in place more stringent processes for developing, reviewing and approving capital expenditures.

We are equally intent on streamlining our organizational structure to focus our resources on areas that we believe will provide long-term returns while creating superior value. Every business and asset class is being reviewed to determine its strategic worth, operational effectiveness and ability to generate solid rates of return. Our assessment criteria are simple and straightforward:

 Does it have today, or is it capable of obtaining, a leadership position in a sustainable growth market?

- Does it have the ability to differentiate itself from competitors in order to command higher rates and margins?
- Does it offer a key service to the customer, or does it have some other long-term strategic potential?
- Does it have short-term economics that are compelling?

Any business line that does not meet these criteria will be a candidate for divestiture. As a result of these evaluations, we have begun to market certain assets in Canada, Alaska and offshore, and we will continue to review others that may command a higher value than our current share price reflects.

This streamlining will ultimately result in the formation of two business divisions: **Drilling and Rig Ser ices,** which will encompass all of our drilling and rig-related operations into one organization; and **Comple ion and Prod c ion Ser ices**, which will consist of well-servicing and coiled tubing rigs, fluids management and pressure pumping services. These divisions will have premium assets and market positions that provide a solid foundation for sustained long-term growth and value creation.

Our objective in forming them is to drive operational excellence, leverage the benefits of our size and become a more customer-focused organization.

The consolidation of business units to form Completion and Production Services is already underway, although the same process will take longer to form Drilling and Rig Services due to the breadth and complexity of the entities involved. These moves

# reorganize

optimize

FINANCIAL FLEXIBILITY

Financial flexibility allows a company to capitalize on attractive investment opportunities as they occur. Strength in this important metric allowed Nabors to achieve superior growth from 2000–2008. While our balance sheet and credit standing are solid, the level of our debt has recently limited our ability to seize certain opportunities, like buying back Nabors stock without compromising our credit standing when market conditions were conducive to such action. Regaining our financial flexibility is why we are monetizing our E&P holdings and other non-strategic assets, reducing capital expenditures and consolidating our operations.

**BUSINESS RATIONALIZATION** 

Nabors management continues to review every business line and asset class to determine if it has a leadership position in the market it serves; the ability to generate attractive returns on investment; or the capability to grow and ultimately achieve these two metrics and be a positive impact on the organization. As we identify specific assets that do not meet these criteria, we will look at various options to monetize these assets, or otherwise demonstrate their value. This will allow Nabors to more effectively utilize our management talent to concentrate on projects that will generate a higher level of return.

# prioritize

**CAPITAL DISCIPLINE** 

Nabors intends to be more selective in how we manage both our growth and our sustaining capital. This includes a more rigorous review and approval process of capital spending decisions. In particular, we will screen for both rate of return and certainty of return to assure consistent free cash flow generation.

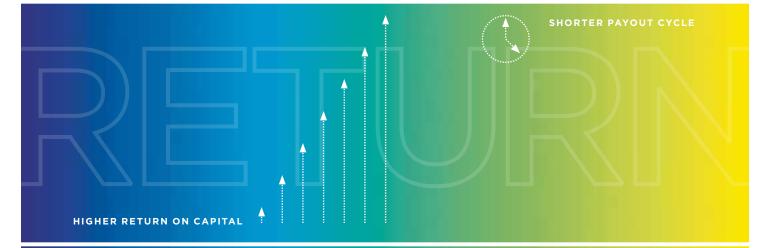

**BUSINESS REALIGNMENT** 

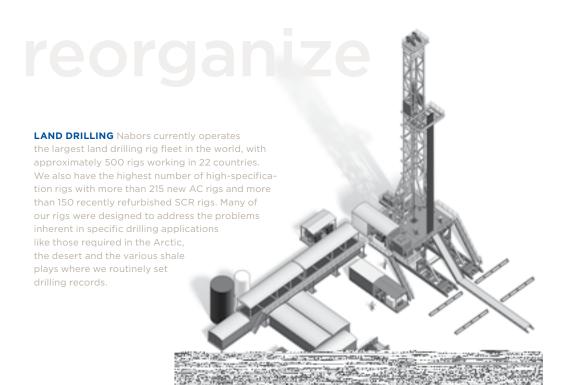

The independent business unit concept has served Nabors well over the last 25 years and has been instrumental in achieving the systematic growth we have achieved. The company has now reached a point where a more customer-centric model will be more effective. We will reorganize into two primary business divisions, **Drilling and Rig Ser ices** and **Comple ion and Prod c ion Ser ices**. The latter is being implemented first since the restructuring of our drilling businesses will be much more complex. This new organization should improve synergies between related operating entities, facilitate the integration of technology, and provide a better customer interface by streamlining and aligning decision-making processes.

OPERATIONAL EXCELLENCE TRANSLATES INTO A MORE CUSTOMER- FOCUSED ORGANIZATION

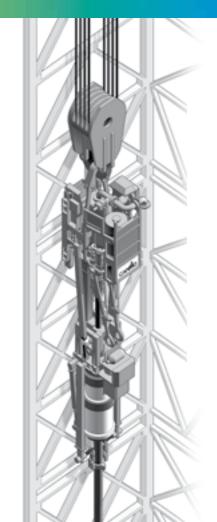

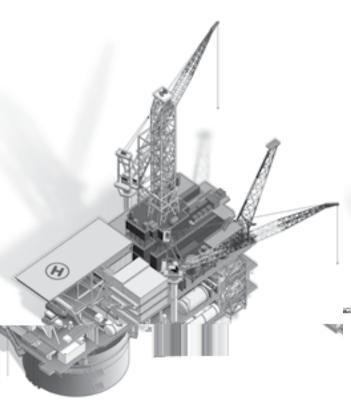

OFFSHORE Nabors currently operates 55 offshore rigs in the US Gulf of Mexico, Alaska and nine other countries worldwide. The company is a leader in the platform drilling rig market with its innovative MASE® and MODS™ rigs, the latter designed to withstand the wind and wave action associated with deepwater offshore drilling. Nabors was also a pioneer in the platform workover rig market with its SUNDOWNER® and SUPER

DRILLING AND

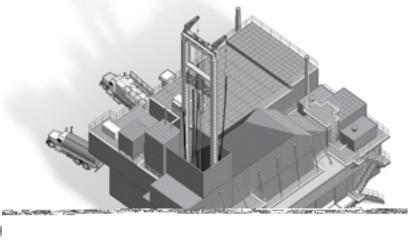

**DRILLING AND RIG SERVICES** Over time, Nabors will consolidate all of our rig operations and rig-related services into one organization. The drilling rig component of this business division will be composed of our global drilling rig operations and drilling-related services consisting of equipment manufacturing, instrumentation, optimization software and directional services.

RIG EQUIPMENT In rig construction, Nabors is vertically integrated and manufactures a premier line of drilling equipment, including top drives, floor wrenches, automated catwalks, drawworks, casing running tools and variable frequency drives. The company has deployed more than 1,000 top drives, almost half of which are on third-party rigs, and serial number one is still performing in the field. We also manufacture K-BOX, a programmable, digital control system that equips both mechanical and SCR rigs to approximate the performance of newer AC technology.

**SPECIALTY RIGS** Nabors built its reputation by innovating and deploying rigs for some of the world's most technically challenging conditions. We continue to upgrade and deploy high-specification desert rigs specifically for gas drilling in the Middle East, and we recently completed construction of two rigs designed for logistically challenging and environmentally sensitive operations in the Far East. We are also constructing two of the world's most sophisticated deepwater platform rigs for deployment in the US Gulf of Mexico.

## RIG SERVICES

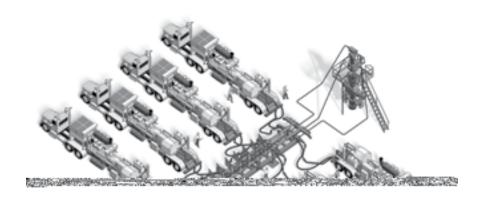

## **DRILLING SOFTWARE AND TECHNOLOGY**

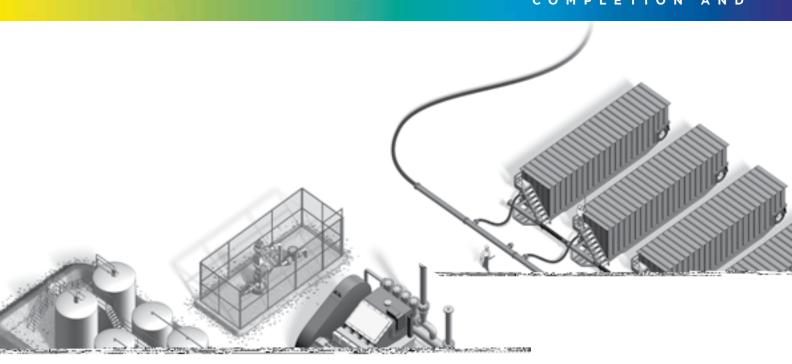

Nabors has developed a proprietary line of innovative drilling software that enhances drilling performance. These include products like ROCKIT® ROCKIT® PILOT™ REVIT™ RIGWATCH® and DRILLSMART™ as well as licensed technology to conduct managed pressure drilling operations. These products are laying the groundwork for automated and remote control of the drilling process.

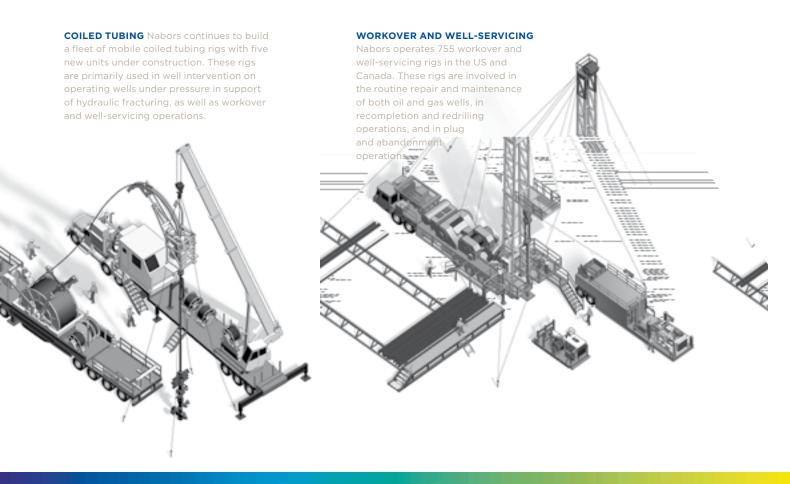

DIRECTIONAL DRILLING Nabors provides directional drilling services and measurement-while-drilling services in the US and Canada and is poised to add operations in other international venues. The company currently has the ability to deploy over 100 systems, including down-hole motors and resistivity, and is playing an integral role in the development of automatic drilling technology.

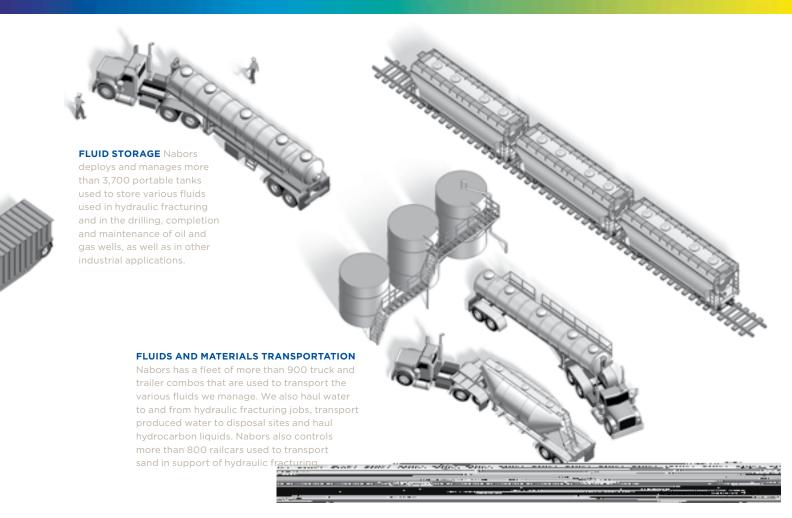

## COMPLETION AND

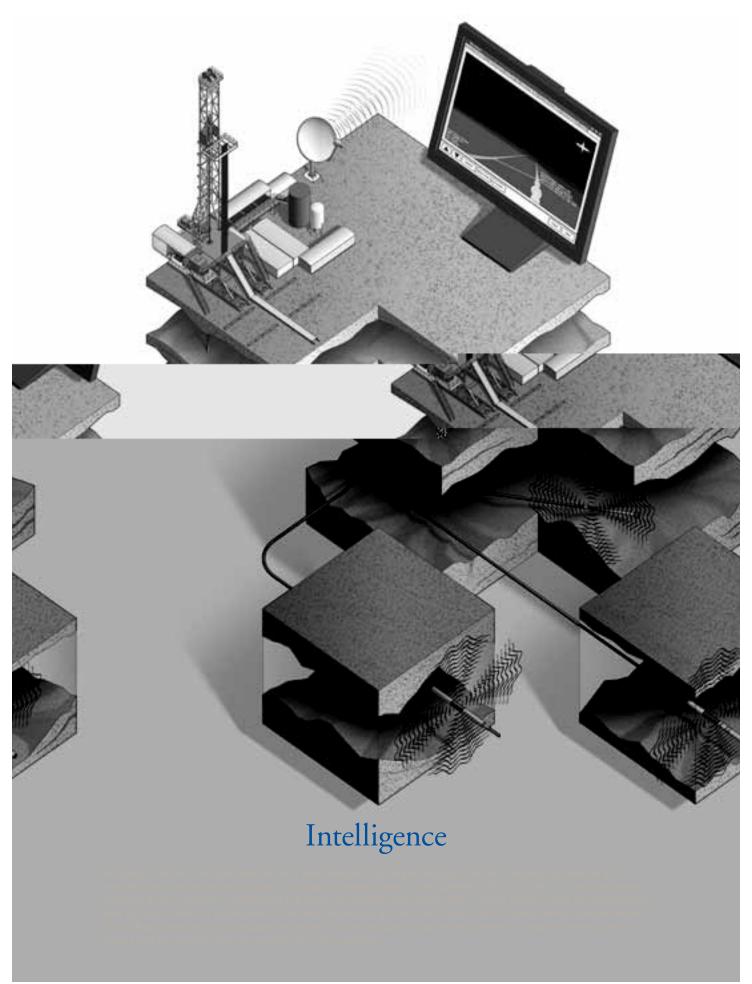

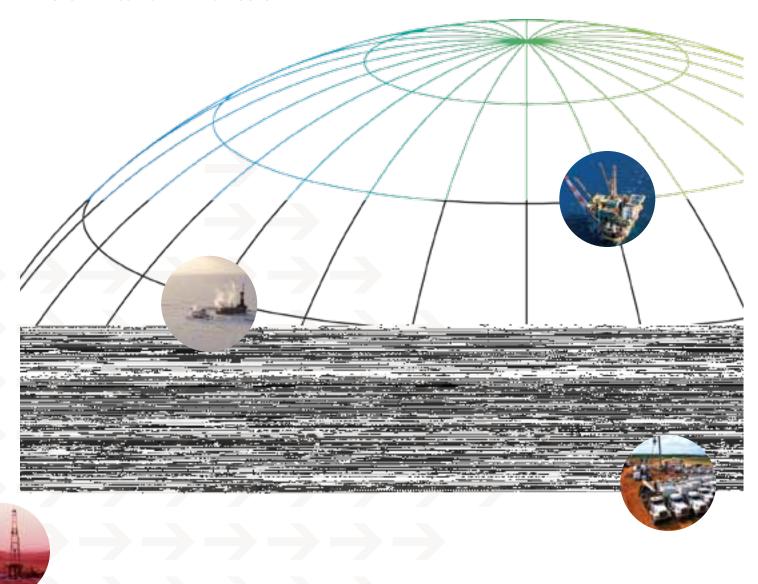

## PRODUCTION SERVICES

Nabors is moving quickly to consolidate both our business operations and our corporate support services. We will also consolidate some field support services into a centralized corporate organization. These actions will optimize the use of existing manpower, eliminate redundant facilities in the field and significantly reduce costs. This will also lay the groundwork for quicker and more uniform adoption and deployment of new technology.
